

## Querys from subquery part:

1.Find Name of those customers whose address is equal to steven's address?

Answer1:

```
select customer_name from customers where customer_address= (select customer_address from customers where customer_name='steven')
```

```
1.Find Name of those customers whose address is equal to steven's address?
Answer1:
select customer_name from customers where customer_address= (select customer_address from customers where customer_name='steven')
```

**Results** Explain Describe Saved SQL History

CUSTOMER_NAME
steven
dany

2 rows returned in 0.00 seconds

[CSV Export](#)

2.Find out phone number of those customers whose customer\_id is after fansey's customer\_id?

Answer2:

```
select customer_phone from customers where customer_no> (select customer_no from customers where customer_name='fansey')
```

```
select customer_name from customers where customer_address= (select customer_address from customers where customer_name='steven')
2.Find phone number of those customers whose customer id is after fansey's customer id?
select customer_phone from customers where customer_no> (select customer_no from customers where customer_name='fansey')
```

**Results** Explain Describe Saved SQL History

CUSTOMER_PHONE
3214
6214

2 rows returned in 0.03 seconds

[CSV Export](#)

3. Find out `manger_id` of those managers who lives outside `Michal's` city and find out phone numbers of those managers too whose `manager_id` comes before these managers?

Answer3:

`select manager_phone from manager where manager_id < any(select manager_id from manager where manager_address <> (select manager_address from manager where manager_name = 'Michal'))`

3. Find out `manger_id` of those managers who lives outside `Michal's` city and find out phone numbers of those managers too whose `manager_id` comes before these managers?  
Answer4:

`select manager_phone from manager where manager_id < any(select manager_id from manager where manager_address <> (select manager_address from manager where manager_name = 'Michal'))`

**Results** Explain Describe Saved SQL History

MANAGER_PHONE
12345
567
568
1234

4 rows returned in 0.00 seconds

## Query's from join part:

1.Find out customer\_name and customer number where ecid is 3?

Answer:

```
select c.customer_name ,c.customer_no from customers c, emp_cus e where ecid=3 and  
c.customer_no=e.customer_no
```

```
1.Find out customer_name and customer number where ecid is 3?
```

```
select c.customer_name ,c.customer_no from customers c, emp_cus e where ecid=3 and c.customer_no=e.customer_no
```

```
||
```

**Results** Explain Describe Saved SQL History

CUSTOMER_NAME	CUSTOMER_NO
jenvey	3

1 rows returned in 0.00 seconds

[CSV Export](#)

2.find out show\_names ,scid,customer's names and reservation of different shows which are booked by different customers?

Answer:

```
select s.show_name,sr.scid,c.customer_name,r.reservation_number from shows s, customers c, ser_cus  
sr, res_cus r where s.show_no=sr.show_no or sr.customer_no=c.customer_no and  
c.customer_no=r.customer_no
```

2.find out show\_names ,scid,customer's names and reservation of different shows which are booked by different customers?

```
select s.show_name,sr.scid,c.customer_name,r.reservation_number from shows s, customers c, ser_cus sr, res_cus r where s.show_no=sr.show_no or sr.customer_no=c.customer_no and c.customer_no=r.customer_no
```

Results Explain Describe Saved SQL History

SHOW_NAME	SCID	CUSTOMER_NAME	RESERVATION_NUMBER
