## **Conclusion**

As we know Star Cineplex is one of a major multiplex theatre of Bangladesh. Thousands of people watches movies at Star Cineplex everyday. They manages all their customers by using theatre management system or database management system. Customers books movie tickets on online by using Star Cineplex's database management system. Star Cineplex stores show timing, customer seat number, hall number etc. everything on their database. Customers pays online then the database updates everything because of atomicity of updates. Customers can access database easily because of concurrent access. Database is secure for the customer of Star Cineplex. Star Cineplex's database system can store multiple names, phone numbers, emails. Star Cineplex's view level is open for individual customers. They stores customer information on their database individual tables. They can update, alter and delete data easily on their database. Thus we can say that database had made the work more easier to control and use to the Star Cineplex's managers, employees and customers.
